

HAND WATER PUMP

Sometimes repair of a backflow preventer requires water to be removed from the valve body or from a meter box. When electrical means are not available or not practical, the best solution is a Beckson 136PF-6 hand pump. This light weight pump is constructed of high impact, non sparking PVC. No priming is needed. The pump body is 1 3/4" in diameter and 36" in length. The discharge hose is 72" long. The volume per stroke is 35 oz.
