

No. TK-7 Backflow Preventer Test Kit

The Watts No. TK-7 Backflow Preventer Test Kit is especially made to test the individual check modules of the Watts No. 7 Residential Dual Check Backflow Preventer and can also be used to test any double check valve backflow preventer, Watts Series 709 or 007. The test kit contains three segments of durable shatterproof tubing, two brass adaptors used to assemble the three tubing segments, and test hardware to enable testing of No. 7 check modules and standard double checks. A rugged simulated leather carrying case is provided for ease of handling and compactness.
